Natural Green Pesticide-PCO Choice

All Natural Pesticides Green Biological Pesticide Products Green Pest Control

Outside Treatment & Inside Treatment for Non-Residential Structures

Click Here to Watch the 8-Minute Video: How to Use PCO CHOICE for Outdoor Pest Control.

Great News! On April 13th, 2012, CedarCide's PCO Choice was approved for USDA BIOPREFERRED labeling. Over the coming weeks customers will see the new logo proudly displayed on our new labels.

Outside Treatment Recommendations

CedarCide.Com formulates an all natural, green pesticide product called PCO CHOICE (Pest Control Operator's Choice) for exterior use. PCO CHOICE is a concentrate composed of 85% modified cedar oil and 15% ethyl Lactate. Cedar oil is a natural essential oil that provides a pheromone interruption agent that impairs the insects mental capacity (fries their brain). When combined with ethyl lactate, a corn oil by-product, it becomes a bio solvent which is instrumental in triggering instant erosion and dehydration of the insect's exoskeleton and subsequently, the egg and

I love Cedarcide. I has been very useful for getti...

larvae.

For every insect you see there are 99 more in egg and larvae stage. Exposure to a water solution spiked with cedar oil and ethyl lactate will destroy the egg and larvae stage, breaking the egg layer cycle and eliminating the next generation of insects.

PCO CHOICE in combination with large amounts of water sprayed from a hose end applicator that is supplied with the product will be instrumental in the demise of numerous non beneficial insects including but not limited to fleas, ticks, mites, mosquitoes, scorpions, beetles, mole crickets, grubs, chinch bugs and many others. It has no effect on sight driven beneficial and pollinator insects such as butterflies or bee's. It will not hurt any of the amphibians or lizard family but will deter venomous snakes and rats from the treated areas.

I suggest you wash down the side of your structures working from the building outward. The first application is the most important and the objective is to make sure a liberal soak is accomplished to all areas including but not limited to the flower beds, shrubbery, grass and concrete areas and any standing water.

Pour 4 ounces of the PCO concentrate into the cup of the hose end applicator provided with the product (cup has legend). Fill to the 26 Ounce line with tap water. Attach to the water hose, turn the lever to on and initiate spraying. Use 8 ounces of PCO for initial soaking.

Each cup of solution will dilute 20 gallons of water spray, when the cup is empty, refill the cup with another 4 ounces of PCO CHOICE and water then repeat as often as necessary to complete the initial soaking. This treatment is very inexpensive and will resolve many other insect issues such as aphids and scale on plants, powdery mildew and all of the normal lawn fungal problems grassy areas experience.

PCO CHOICE loves water so periodic rains will enhance its performance. Follow up applications should be conducted as required, depending on the local insect population your endeavor encompasses. If you follow this protocol, you can say goodbye to the fleas and any other pests you may have.

Remember, an insect never travels more than 150 foot from where it was hatched, treatment of your sacred area and a 150 foot distance from the area will make an off limits area to pests that you can now enjoy.

Non-Residential Interior Building Spraying Recommendations

(For Residential Spraying we recommend BEST YET)

Using a hand held Atomizer (sprayer), preferably air compression in design, spray a mist of PCO Choice SOLUTION on all horizontal and vertical surfaces. Use a compression type sprayer to disperse a fine mist of solution spray to each and every square inch of horizontal floor surface including but not limited to the carpet, tile and wood floor areas. Spray the mop boards first and treat vertical surfaces at least 24 inches from the floor. Work backward from the farthest point of the room making sure a liberal amount of the solution is being applied to all areas. It is imperative that no area be left untreated. Spray the legs of all furniture and any lamp posts or other vertical supports. PCO Choice is a contact killer as well as a pheromone interruption agent. It is also a penetrant and will erode the insect egg and larvae by promoting de-hydration.

The use of approximately 1 gallon of solution is required to satisfactorily treat a 1000 square foot room. 1 gallon per 1000 square foot of surface area is normally required to conduct a satisfactory control or preventative maintenance treatment. Use 4 Ounces of PCO Choice per gallon of water. The use of warm or hot water when mixing the product is always a prudent formulation technique.

Non-Residential Interior Structure Fogging

(For Residential Spraying we recommend BEST YET)

Fill the CedarCide Fogger reservoir with a PCO Choice and water solution, use a mixture of 4 ounces PCO Choice per gallon of water. Use the adjustable VMD (volumetric mean diameter) to facilitate both dry and wet fog applications, the higher the setting the wetter the fog.

We recommend a medium fogging setting(VMD) for most applications. Work backward from the far end of the room, aiming the fogger at the floor areas. Be sure to direct the fog under furniture and into corners and at least twenty four inches up from the floor area of any drapes in the room. The amount of approximately 1 quart of solution per room is suggested to insure a 100% elimination and prevention of immediate re-infestation of insects. Before leaving the room, start the air conditioner unit or air circulatory and allow it to circulate the air in the room. This will eliminate any dust mites in

the AC system. Cleaning the filter is suggested as it will promote a fresh odor throughout the cooling/heating system.

It is suggested that the structure be closed and the fog allowed to settle for approximately one hour. At that time re-entry can be made and a cleaning in the normal manner can be accomplished.

The aroma of Cedar Oil will leave a fresh smell that is pleasing to the inhabitants. Any overwhelming aromas will dissipate in a matter of 6 hours. Rooms can be aired out if desired but it is suggested they be kept closed for at least an hour after treatment to enable a pheromone interruption event to impair and destroy the insect's mental capacities and triggering their subsequent death.

Got a question? Get live telephone help anytime Monday-Friday 7am-10pm, Saturday 9am-5pm, we would love to hear from you! Call 1-800-842-1464.

PCO Choice is the perfect option to spray your outdoor area. It is safe for the cats but deadly to bugs.
